

OUTSIDE SEAM LACQUERING UNIT ANL-LST: SIMPLER, FASTER AND MORE PRECISE

The new ANL-LST is a logical development of the outside seam lacquering unit that has proven its worth for so many years now.

Its outstanding qualities are the relatively low acquisition and running cost, maximum flexibility, first-class ergonomics and ease of use. The brush can now be directed onto the seam simply using a star grip. A new clamping system fixes the brush more firmly in position and facilitates simpler height adjustment and fast replacement. Elongated guide rods ensure precise positioning of the can-bodies as well as even and regular lacquer application. Reduced brush stroke movement enables faster switching speeds and more precise control of the starting point for lacquer application.
