

## TOOL BOX FOR REFINISHING AND ALIGNING ROLLER HEADS

### Maintenance is much easier with the Roller Head Service Kit.

In the Roller Head Service Kit, the customer has all required tools and spare parts at hand for the roller head maintenance. Efficient refinishing and alignment of the roller heads helps gain valuable production time and reduce machine downtime to a minimum.

The highlighted parts are delivered with the welder and are therefore not supplied with the Roller Head Service Kit. However, these elements can be re-ordered if needed.

**EFFICIENT ROLLER HEAD MAINTENANCE THANKS TO THE ROLLER HEAD SERVICE KIT.**

## ADVANTAGES

- Easy and efficient roller head replacement.
- All tools, spare parts, and drawings required for replacing roller heads are available and ready at hand, according to the 5S methodology.
- Spare parts stock clearly visible and easy to reorder.
- Missing tools are noticed immediately.

## RETROFITTING

The Roller Head Service Kit is available on request for all Soudronic welders. The tool box is arranged in accordance with the machine type and lower arm.

«With the roller head kit, you have all you need in one small box for reprofiling the welding rolls. Moreover, looking at the components in the box, you can keep a safety spares stock just where you need it.»

Roberto Parada, Project and Maintenance Supervisor, Frinsa del Noroeste S.A.
