WELDER MODEL NOW**

**BWM 2000 / BWM 2100 / BWM 2200 (NORMA)
MWM 6000 / MWM 6100 / MWM 6200 (CORONA)**

CONSIDER THAT...

The average availability and support of general industrial controls is around 15 year.
Soudronic has been supporting machines which are older than 25 years!

Of course would we like to continue to provide you with our service and supply you with spare parts even longer, but are heavily depending on our electronic components suppliers.

We believe that first-class service also includes informing you in advance if such sourcing situation comes to an end.

WHAT DOES THIS MEAN FOR YOU?

- Control '86 will be serviced and spare parts will be available until end of 2021, after that we can't guarantee their availability nor their prices
- With immediately effect, we'd like to draw your attention to consider a control replacement kit, which is available for the welder types stated on the front page

A CONTROL REPLACEMENT KIT CONSISTS OF:

- Latest version of UNICONTROL (hard- and software)
- Servo drives for Main- Wire- and ROC - drives
- Frequency inverters for Rollformer, wire profiler, wire chopper and OHC
- Newest type of PULSAR 304 static welding converter, incl. new welding transformer

(existing external wiring of machine will be re-used)

AVAILABLE OPTIONS

- Weld monitor SWM-3
- Industry 4.0 readiness
- New „water plate“ (stand alone or integrated)
- Completely new external wiring
- Discon conversion kit (mercury free roller heads)

We will be pleased to work out a quotation for the conversion or for a trade-in offer of your welder.

Please contact Soudronic AG or Can Man AG.
