

Soudronic

New pricing and easier handling of Soudronic Discon Rollerheads

Dear Customer, Dear Partner,

Soudronic's DISCON roller heads have been proven for decades as the reliable process solution for can body welding. Soudronic has constantly been working, since its market introduction, on developments and improvements on the DISCON system. Soudronic also has invested heavily in new manufacturing equipment and technologies. From January 2021 Soudronic DISCON rollers from diameter 45 mm up to 99 mm come now with a reduced and very attractive pricing. Please also be aware that roller heads in this diameter range purchased from January 1st, 2021 cannot be repaired anymore. To improve roller head handling within your plant and to always ensure the quality and experience of a new DISCON roller head Soudronic has decided to stop the process of administrating and shipping of roller heads for repair.

Technology that keeps you ahead.
