

## Feed directly from the can

GreenPeel can also be used as a **direct feeding solution**. Simply open the can and feed your pet straight from it. There is no need to transfer the contents into a bowl. The smooth, edge-free design ensures clean and safe handling, with no risk of injury to your pet.

## Specifications

- Production speed up to 750 cpm
- Diameter 65–99 mm
- Height 35–46 mm  
(higher on request)
- Blank thickness 0.17 mm
- Can material TFS or TS
- Peel force ~ 25 N
- Sealing burst pressure 1 bar

## For inquiries

Soudronic is the exclusive manufacturer of can making machinery for the production of GreenPeel® direct-sealed 3-piece cans.

## The innovative can for food and pet food

# Soudronic

# GreenPeel® Direct sealed 3-piece-can

**GreenPeel** is the first direct-sealed 3-piece can concept introducing a new approach to can making. By **eliminating the weld seam**, it enables new possibilities in decoration, filling, and user convenience.

### Effortless product release

Simply open the can, turn it, and the contents **glide out smoothly** and completely. Thanks to the edge-free interior, there is no product retention.

### Trouble-free direct sealing

Unlike conventional 3-piece cans, GreenPeel cans have no weld seam. This design enables **trouble-free** direct sealing and offers the same handling and performance as peel-off ends (POE).

### Less material, lower footprint

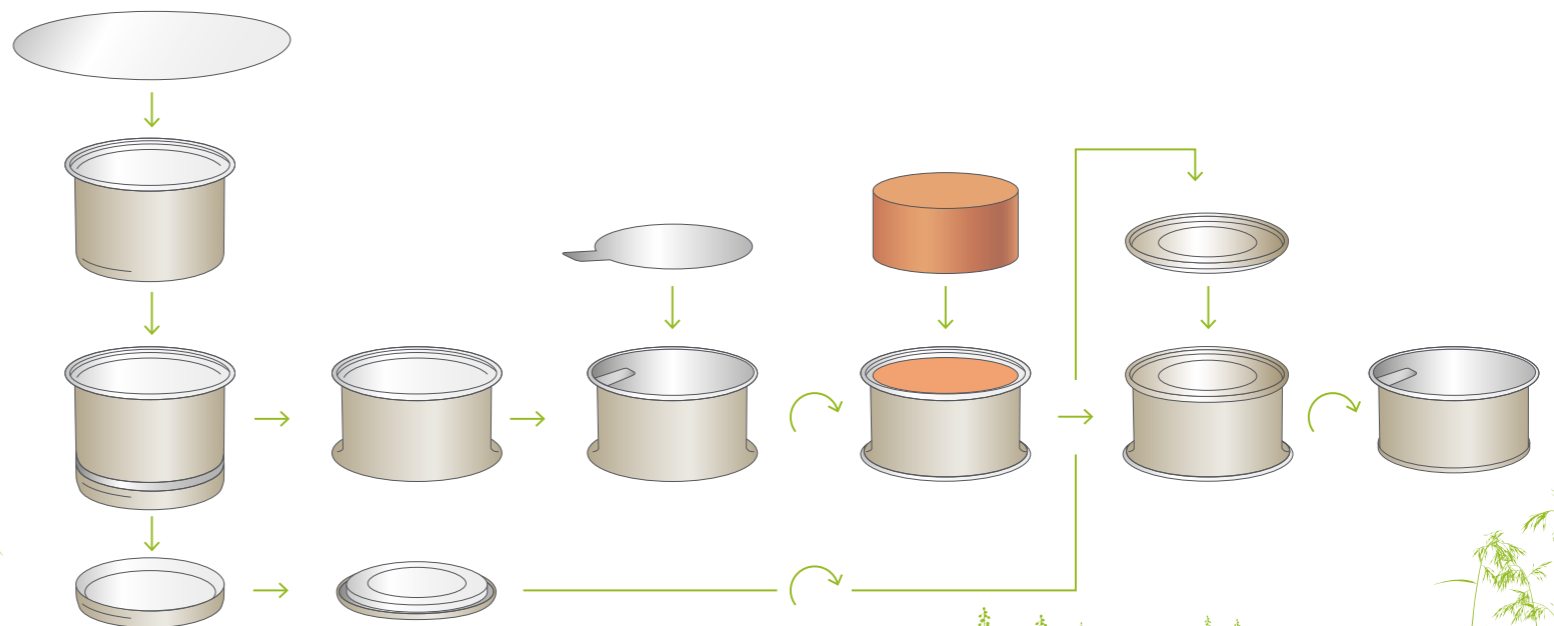

GreenPeel reduces material usage by up to 10% and lowers the carbon footprint by up to 7%. **Leak testing before filling** minimizes product waste. All materials are fully recyclable.

## Innovative manufacturing process

A deep-drawn can is separated, and the bottom is formed into an end. The key step is the trouble-free and reliable application of the sealing foil to a **weld-seam-free canbody**. Airtightness is tested before filling.

Bottom-side filling creates an **appealing product surface**, while the smooth, edge-free interior ensures complete product release.

The can is also suitable for **aggressive retort products**, as there are no exposed cut edges inside the can that could oxidize. The **canbody and end** are made from the **same material** in one integrated process, simplifying handling and improving efficiency.

## In a nutshell

- Effortless release of contents
- Full 360° decoration
- Filling from the bottom for enhanced food appeal
- Feeding pets directly from the can
- Resistant to aggressive retort products
- Peel-off lid with high burst pressure

## How does it work?

Watch the animation to explore the GreenPeel manufacturing process and its benefits.
